

What is claimed is:

1. A microphone assembly comprising:
 - a microphone;
 - a connector secured to an underside of the microphone;

5 and

a gasket having a sound collecting hole and secured on an upper surface of the microphone.

2. The microphone assembly according to claim 1 wherein the microphone assembly has a square pillar shape.

10 3. A method for manufacturing microphone assemblies comprising the steps of;

preparing a connector aggregation having a plurality of divisions;

15 preparing a microphone aggregation having a plurality of divisions, a microphone being provided in each of the divisions;

preparing a gasket aggregation having a plurality of divisions, and having a sound collecting hole at each of the divisions;

20 forming each of the divisions into a same shape and a same size;

stacking said aggregations and adhering the aggregations to each other to form an aggregation assembly;

25 cutting the aggregation assembly to separate a microphone assembly at each division.

4. The method according to claim 3 wherein the connector aggregation is made of an anisotropic conductive elastomer.
